

Print Sharp

2777

Specialty Screen Ink Additive

CONVENTIONAL

Always test ink on substrate prior to production run. Please refer to the MSDS for safety precautions.

Description: Print Sharp is an ink additive for use in inks that will not print well in small detail. When a small amount is added to the ink, it will help detailed or fine print areas to hold their definition. The thick, buttery viscosity of Print Sharp changes the rheology of the ink so it will stay only where it is printed. Antistatic agents are also built into Print Sharp to eliminate any “hairing” or “cob webbing” caused by electrostatic charge generated by the printing system.

Features:

- Eliminates Hairing
- Small Detail Aid
- Weatherable
- Compatible with most of Deco-Chem's Inks
- Ease of Application

Mixing: The effective amount of Print Sharp to be added to the ink varies with the type of ink. As little as 1%, or as much as 7% may be needed to alter the way the ink prints. It is generally better to start with a small amount then add more. Pretests are recommended prior to production run.

Compatibility: The Print Sharp is compatible with a wide variety of ink systems, including inks based on vinyl, acrylic, epoxy, alkyds, cellulose, polyester, and more.

Storage: Ink should be stored in a metal container at room temperature (75°F). Inks previously used for printing runs should be stored in a separate container to avoid cross contamination. Ink has a minimum shelf life of 6 months from date of manufacture if the above guidelines are followed and there has been nothing added to the ink.

Sizes: 1 and 5 Gallon Pails or 30 or 55 Gallon Drums Available
